SUMMARY

Software Engineer with nearly 2+ years of experience, primarily focused on frontend development. Experienced in building modern web applications with React and Next.js, with hands-on backend experience using NestJS and ASP.NET Core. Interested in growing into a full-stack role and building reliable software across the entire application stack.

EXPERIENCES

03/25 - 07/26 • Frontend Developer - Modely Strategy & Consulting

- Developed and maintained features for an insurance service platform using Next.js, Gatsby, Tailwind CSS, Styled Components, and Material UI.
 - Built marketing and product pages with a focus on performance, SEO, and conversion.
 - Implemented end-to-end user flows for insurance quotation, purchase, and claim submission.
 - Built and deployed an Alipay Mini Program, adapting existing business workflows and UI components to the platform.
 - Designed and implemented a backend feature using NestJS, collaborating with backend engineers from feature design and API implementation through integration.
-

05/24 - 01/26 • Frontend Developer - Freelance

- Migrated an e-commerce management application to Next.js, Tailwind CSS, and Ant Design, improving maintainability and user experience.
 - Ensured compatibility with existing system workflows and APIs throughout the migration.
 - Implemented new features and enhancements based on evolving project requirements.
 - Participated in code reviews, identifying implementation issues and contributing to improved code quality.
-

10/23 - 01/24 • Frontend Intern - TMA Solutions

- Developed a tour booking application using React and Material UI based on provided designs and requirements.
- Implemented application features and user interfaces while providing feedback on design and functionality.

Selected Projects

EventHub

.NET 10 • PostgreSQL • Redis • Stripe API • Docker • xUnit/Moq

- Designed and built a RESTful event ticketing and booking API using a layered architecture that separates business logic from data access.
- Engineered a concurrency-safe ticket booking flow using atomic conditional database updates and transaction management, preventing overselling under concurrent requests.
- Built an asynchronous payment workflow with idempotent request handling and webhook signature verification to safely process payments and maintain data consistency.
- Implemented Redis caching with cache invalidation strategies and distributed rate limiting to improve performance and protect APIs from abuse.
- Developed a background worker to automatically handle expired bookings and restore ticket availability.
- Added unit tests and CI checks to validate core business logic and prevent regressions on every push.

SKILLS

- **Languages:** JavaScript, TypeScript, C#
- **Frontend:** React, Next.js, Gatsby, Three.js, Tailwind CSS
- **Backend:** .NET 10, NestJS, REST APIs
- **Database & Caching:** PostgreSQL, Redis
- **Tools:** Git, GitHub Actions, Gitlab, Docker

EDUCATION

University of Technology and Engineering - Computer Engineering Technology - 3.1/4.0 (GPA)
